¹ **Chained dollars** -- A measure used to express real prices. Real prices are those that have been adjusted to remove the effect of changes in the purchasing power of the dollar; they usually reflect buying power relative to a reference year. The measure is based on the average weights of goods and services in successive pairs of years. It is "chained" because the second year in each pair, with its weights, becomes the first year of the next pair.

Cautionary note: There is a discontinuity in the GDP by state time series at 1997, where the data change from SIC industry definitions to NAICS industry definitions. This discontinuity results from many sources, including differences in source data and different estimation methodologies. In addition, the NAICS-based GDP by state estimates are consistent with U.S. gross domestic product (GDP) while the SIC-based GDP by state estimates are consistent with U.S. gross domestic income (GDI). This data discontinuity may affect both the levels and the growth rates of the GDP by state estimates. Users of the GDP by state estimates are strongly cautioned against appending the two data series in an attempt to construct a single time series of GDP by state estimates for 1963 to 2005.

As of the October 26, 2006 release, the BEA renamed the gross state product (GSP) series to gross domestic product (GDP) by state.

Revisions to the BEA's estimates of GDP by state for 2004-2006 and newly available advance estimates by NAICS industry sector for 2007 were completed and released on June 5, 2008

NOTES:

BEA prepares estimates of GSP in millions of current dollars and of real GSP in millions of chained (2000) dollars. The estimates of real GSP are derived by applying national implicit price deflators to the current-dollar GSP estimates for the detailed industries. These estimates of real GSP reflect the uniqueness of each state's industry mix, but they do not reflect differences by state in the prices of goods and services produced for local markets.

Updated Historical GSP estimates for 1963-76: This data series replaces experimental estimates that were last published in 1988. The updated estimates are based on current concepts, methods, and data, and are being released on a Standard Industrial Classification (SIC) basis. GSP estimates are based on SIC from 1963-97, and on a North American Industry Classification (NAICS) basis from 1997 forward.
