NOTES:

BEA prepares estimates of GSP in millions of current dollars and of real GSP in millions of chained (2000) dollars. The estimates of real GSP are derived by applying national implicit price deflators to the current-dollar GSP estimates for the detailed industries. These estimates of real GSP reflect the uniqueness of each state's industry mix, but they do not reflect differences by state in the prices of goods and services produced for local markets.

Updated Historical GSP estimates for 1963-76: This data series replaces experimental estimates that were last published in 1988. The updated estimates are based on current concepts, methods, and data, and are being released on a Standard Industrial Classification (SIC) basis. GSP estimates are based on SIC from 1963-97, and on a North American Industry Classification (NAICS) basis from 1997 forward.
