<sup>1</sup> Implementation of a new March Current Population Survey (CPS) processing system.

<sup>2</sup> Implementation of Census 1990 based population controls.

<sup>3</sup> Data collection method changed from paper and pencil to computer-assisted interviewing.

<sup>4</sup> Health insurance questions were redesigned. Increases in estimates of employment-based and military health care coverage may be partially due to questionnaire changes. Overall coverage estimates were not affected.

<sup>5</sup> Beginning with the March 1998 CPS, people with no coverage other than access to Indian Health Service are no longer considered covered by health insurance; instead, they are considered to be uninsured. The effect of this change on the overall estimates of health insurance coverage is negligible; however, the decrease in the number of people covered by Medicaid may be partially due to this change.

<sup>6</sup> Estimates reflect the results of follow-up verification questions and of Census 2000 based population controls.

<sup>7</sup> Sample expanded by 28,000 households.

<sup>8</sup> These estimates from the 2005 Annual Social and Economic Supplement were revised based on improvements to the algorithm that assigned coverage to dependents, and there was an adjustment to the weights.
