¹ Census data are for April 1. All housing unit data are estimates as of July 1 of each year. Household data before the 2000 census are estimates as of July 1 of each year. Household data after the 2000 census are based on twelve monthly samples during the calendar year.

² Household data after the 2000 census are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate is represented through the use of a confidence interval. The confidence interval computed here is a 90 percent confidence interval and can be interpreted roughly as providing 90 percent certainty that the true number falls between the lower and upper bounds.
